Testbeam monitoring

Georgios Mavromanolakis *

Cambridge University

* (also with **FERMILAB**)

Outline

- ► **General/Features**
- ► **Input/Output**
- ► **Code structure/Classes**
- ► **Info displayed**
- ► **Remarks**

General

- **application for testbeam monitoring**

  : code arranged in client-server parts (**GUI** and **SENDER**)

  : the different parts communicate through a socket
  i.e. can live and run at the same pc or at different pc's

- **tasks**

  : **GUI**'s task

  ▷ to provide a basic functionality through
  entry fields and action buttons

  ▷ to display the info that the sender sends

  : **SENDER**'s task

  ▷ to process the data and send plots and numeric info to gui

  ▷ to create persistent output (.root, .printout.ps, .log.txt, etc)

General features

► .

: requires ROOT 4.02/04 or higher and LCIO 01-04 or higher

: communication through secure connection using ssh is possible
i.e. gui and sender running in pc's that are behind different firewalls

: multiple types of transmission can occur,
currently one light and very frequent (say every 10events) and
one heavy and less frequent (say every 1000s events or some minutes)

: modular arrangement of components/detectors
easy to add/handle new ones

: gui's display pads invoke ROOT interactively

: it is a light application, easy to install/run

General features

- **info transmitted and displayed**
  - numerical
    - : event labels
    - : counters per detector
  - graphical
    - : 3d event display
    - : daq rate, badreadout, time series ...
    - : tdc time signal, track coordinates
    - : Ecal hits, energy, pedestals/noise ...
      Hcal hits, energy, pedestals/noise, leds ...
      Tcmt hits, energy, pedestals/noise, leds ...
    - : particle id plots, veto signal
    - : cross check plots, Tracker vs Ecal vs Hcal ...

Input/Output

- **input**

  : .bin data files produced by daq

  + mapping files for Tdc, Ecal, Hcal, Tcmt

  + calibration constants for Ecal, Hcal, Tcmt

- **output**

  : `Monitor<run>.<file>.root`
  `Monitor<run>.<file>.printout.ps`
  `Monitor<run>.<figure>.log.txt`

  + for Hcal `Monitor<run>.<file>.HcalLed.dat, ..Ped.dat`

CALICE Testbeam Program (last 12 months)

(full monitor support provided)

- **DESY, 22 May - 31 May 2006**
  - : **ECAL(W/Si)** testbeam with electrons at 1-6 GeV
- **CERN, 24 Aug - 3 Sep 2006**
  - : **ECAL(W/Si)** testbeam with electrons at higher energy
  - : **AHCAL, TCMT** commissioning
  - : **AHCAL** technical run with electrons/pions
- **CERN, 12 Oct - 24 Oct 2006**
  - : combined **(ECAL+AHCAL+TCMT)** physics run with electrons/pions
- **DESY, 2 Mar - 26 Mar 2007**
  - : **ECAL(W/scint.strip)** testbeam with electrons at 1-6 GeV

Remarks/Todo

- **documentation**

  : basic technical documentation exists, needs substantial improvement

- **MonitorSpy**

  : a first solution implemented but not developed further,
  requires the monitor pc to be directly accessible through ssh

DHCAL "slice test"

- .

  : monitoring and support will be provided
